

Rules for registration of research paper

In addition to the structure, there are requirements for the rules for the design of research papers. Here are the most important ones:

- Sections are denoted with Arabic numerals sequentially numbered.
- The section is divided into subsections with the corresponding numerical designation.
- Figures, graphs, diagrams and diagrams of small size are located immediately after their first mention in the text and are also numbered consecutively, corresponding to the sections.
- Large drawings and large diagrams, as well as other images are placed in applications. It should be borne in mind that in the text such a figure is referenced with an indication of the application.
- The application itself is numbered with letters.
- Tables, formulas and figures have their own designation, which is drawn up in accordance with the above standard.

Reporting on research paper

When designing research paper, a standard A4 sheet is used, on which the text is typed:

- Using single page printing.
- Font - Times New Roman 14 point size.
- There is a 1.5 spacing between the lines.
- Margins: right - 10 mm, all others - 20 mm.
- It should be noted that no corrections in the R&D text are allowed. Therefore, if the author made a mistake, then this sheet will need to be reprinted.

As for the volume requirements, it all depends on who writes this work and for what purposes:

- So, for term papers, it can be 20-30 sheets.
- For master's theses - about 80-90 pages.
- For candidate dissertations - 100-150 sheets.
- For doctoral students - about 300.

An example of a research paper

Designing a research paper is a rather troublesome task that requires responsibility and a clear understanding of the structure. It's always easier to order a ready-made task from a research paper writing service. For review, you will be given several copies, the design of which is done according to all the rules.
